

SQL Programming For Beginners With languages, there could be no communication between people around the world. Yes, there are different languages for different communities of people, but there are also individuals who understand many languages and can translate between the various people groups. Computer languages allow different hardware devices and even various kinds of software to communicate with one another - provided that a translator is available. SQL is like the human translator who is able read various databases - regardless of the other languages that may be running on it. As such, SQL is one of the most crucial computer languages. Although the standard for SQL is set by ANSI (the American National Standard Institute), there are variations or subsets of the language: MySQL, PL/SQL, MS Access, etc. In SQL Programming For Beginners you will discover many benefits for those who learn the language: SQL allows you to access any data in any RDBMS While you have access to the data, you can describe it Additionally, you can manipulate this data within and outside the database By using SQL modules, pre-compilers, and libraries, a user can embed different languages within one language. SQL allows the user to drop and create tables and databases SQL also allows the user the option of creating view options, stored procedures, and specific functions within a database. After the creation of the database, SQL gives the user the opportunity to set permissions on views, procedures, and tables. Even as a beginning programmer, you will begin learning: The history of SQL as a language for relational database management How to understand the SQL process The most common commands and built-in functions SQL uses to access and modify databases In this book, you will also learn Ten steps to SQL success: Defining the task Determine the entire scope of the project What will it take to complete the project Create a requirements statement Create a formal model Designing the database application Build it Documentation Test, test and test again Maintenance ACT NOW!
